CASE STUDY

AGRICULTURAL SOLAR INSTALLATION, AN IMPORTANT RENEWABLE ENERGY SOURCE FOR THIS CENTRAL VALLEY DAIRY FARM.

K&M Visser Dairy has been producing milk and other dairy products for more than 20 years. Their daily production consumes large amounts of energy, while California's central valley pays some of the highest energy rates in the US.

Historically California businesses have experienced the highest electricity rate growth in the country. In recent years many California businesses have seen their rates more than double.

1990 - 2020 Historical CA C&I Energy Rates

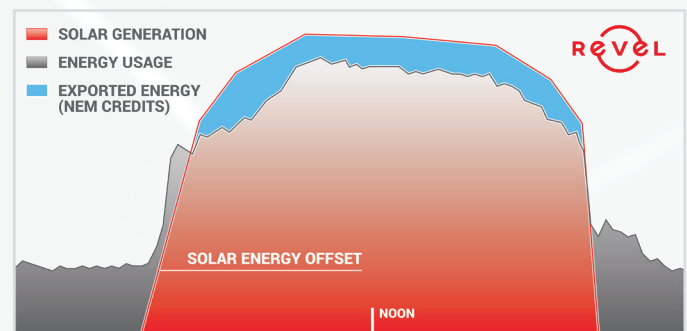

K&M Visser Dairy didn't want their utility to dictate their electricity costs – after contacting the Revel Energy team, a plan was quickly set in place and executed.

Project managers worked with Pixley and Tulare County authorities and code enforcement along the way to collect the necessary certifications, interconnection with the utility company and permission to operate.

Revel fit a 771 kW agricultural solar ground mount tracker system to the property, so the 2,000+ panels track the sun through the sky for optimal production. Nine inverters convert the direct current to quality AC power, enough for even high-production days.

Taking advantage of multiple benefits and programs like the Solar Investment Tax Credit (ITC) and Net Energy Metering Aggregate (NEMA), K&M's new system offsets 97% of their electricity use by earning credits for overproduction during the day that pays for use at night when the system isn't producing.

The system is expected to produce over \$8 million of electricity in its 30 year lifespan. With diversified energy sources, significantly less electricity costs, and happy cows; K&M Visser Dairy looks toward the future with a smaller carbon footprint and much lower energy costs.

Revel Energy's team of commercial and agricultural solar specialists offer turnkey solutions for California businesses to lower their electricity costs ultimately increasing cash flow.
