CASE STUDY

COMMERCIAL SOLAR INSTALLATION, AN IMPORTANT RENEWABLE ENERGY SOURCE FOR THIS CONCRETE CONTRACTOR.

Largo Concrete, INC., a commercial concrete contractor in Tustin, California, utilizes a commercial solar installation and energy storage to reduce energy costs by approximately 99%. One of many California Businesses lowering energy costs and raising net income.

Historically California businesses have experienced the highest electricity rate growth in the country. In recent years many California businesses have seen their rates more than double.

1990 - 2020 Historical CA C&I Energy Rates

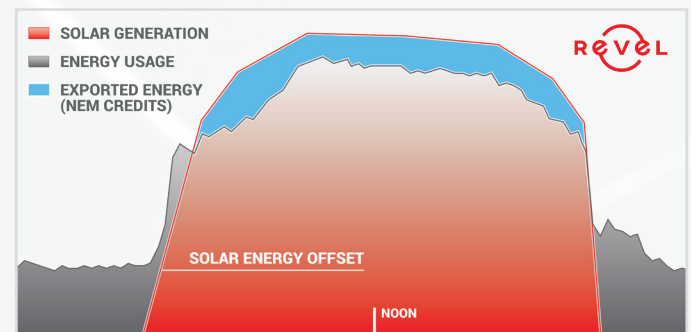

Largo wanted to take control of the electricity cost with commercial solar so they teamed up with Revel Energy to design a custom commercial solar system for their Irvine facility.

Revel's project managers got started, working with Tustin city and Orange County authorities and code enforcement to collect the necessary certifications.

Revel installed a 218 kW rooftop fixed-tilt solar system consisting of 590 solar panels. The system is expected to produce 375,000 kWh of energy annually as Largo uses 378,000 kWh, this offset is significant.

Taking advantage of multiple benefits and programs like the Solar Investment Tax Credit (ITC) and Net Energy Metering (NEM), Largo's new system also offsets 99% of their electricity use by earning credits for overproduction during the day that pays for use at night when the system isn't producing.

Largo Concrete, INC., looks toward a bright future with a smaller carbon footprint and much lower energy costs.

Revel Energy's team of commercial and agricultural solar specialists offer turnkey solutions for California businesses to lower their electricity costs ultimately increasing cash flow.
