CASE STUDY

COMMERCIAL SOLAR INSTALLATION, AN IMPORTANT RENEWABLE ENERGY SOURCE FOR THIS INJECTION-MOLDING PLASTICS MANUFACTURER.

Nubs Plastics is one of California's top injection molding plastics manufacturers. For more than 20 years, Nubs has been a key supplier to various industries such as agriculture, construction, medical, consumer products and more.

Historically California businesses have experienced the highest electricity rate growth in the country. In recent years many California businesses have seen their rates more than double.

1990 - 2020 Historical CA C&I Energy Rates

Nubs wanted to take control of the electricity cost with commercial solar so they teamed up with Revel Energy to design a custom commercial solar system for their Vista facility.

Project managers worked with Vista city and San Diego County authorities and code enforcement along the way to collect the necessary certifications.

Revel installed a 260 kilowatt system consisting of almost 700 solar panels supported by 346 power optimizers funneling into 9 inverters. The system is expected to produce \$4.2 million dollars of electricity in its 30-year lifespan.

Taking advantage of multiple benefits and programs like the Solar Investment Tax Credit (ITC) and Net Energy Metering (NEM), Nubs' new system offsets 41% of their electricity use by earning credits for overproduction during the day that pays for use at night when the system isn't producing.

Nubs Plastics is dedicated to maximizing efficiency, with a bold decision to look toward the future with commercial solar, the molded plastics manufacturer now has controlled their electricity costs, almost eliminating those large bills from their utility – all while significantly reducing their carbon footprint!

Revel Energy's team of commercial and agricultural solar specialists offer turnkey solutions for California businesses to lower their electricity costs ultimately increasing cash flow.
