CASE STUDY

COMMERCIAL SOLAR INSTALLATION, AN IMPORTANT RENEWABLE ENERGY SOURCE FOR THIS PLASTICS DISTRIBUTOR AND FABRICATOR.

Orange County Industrial Plastics is one of the largest distribution warehouses of acrylic sheets and many other raw plastic materials. Their state of the art facility offers custom fabrications for major department stores, electronic stores, warehouses, club stores, and more.

Historically California businesses have experienced the highest electricity rate growth in the country. In recent years many California businesses have seen their rates more than double.

1990 - 2020 Historical CA C&I Energy Rates

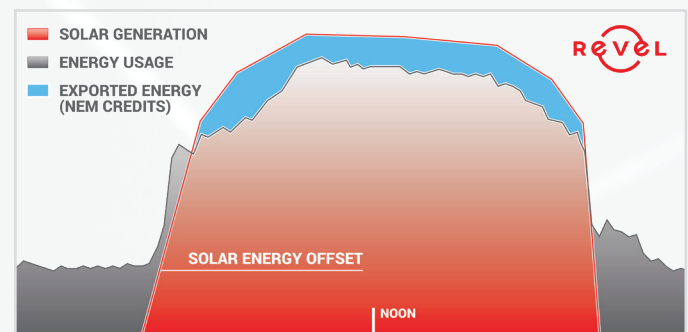

OCIP wanted to take control of the electricity cost with commercial solar so they teamed up with Revel Energy to design a custom commercial solar system for their Anaheim facility.

Revel's project managers got started, working with Anaheim City and Orange County authorities and code enforcement to collect the necessary certifications.

Revel installed a 372 kW system consisting of almost 1,000 solar panels supported by 492 power optimizers funneling into 3 inverters. The system is expected to produce \$3.3M of electricity in its 30-year lifespan.

Taking advantage of multiple benefits and programs like the Solar Investment Tax Credit (ITC) and Net Energy Metering (NEM), OCIP's new system offsets 100% of their electricity use by earning credits for overproduction during the day that pays for use at night when the system isn't producing.

Orange County Industrial Plastics looks toward a bright future with a smaller carbon footprint and much lower energy costs.

Revel Energy's team of commercial and agricultural solar specialists offer turnkey solutions for California businesses to lower their electricity costs ultimately increasing cash flow.
