COMMERCIAL SOLAR INSTALLATION, A RENEWABLE ENERGY SOURCE FOR THIS PROVIDER OF ENVIRONMENTAL SERVICES.

Diamond Environmental Services has grown over the last 20 years from providing pumping and porta-potty rentals to providing many different environmental services. Headquartered in San Marcos, Diamond Environmental works throughout southern California, dedicated to providing excellent customer service.

Historically California businesses have experienced the highest electricity rate growth in the country. In recent years many California businesses have seen their rates more than double.

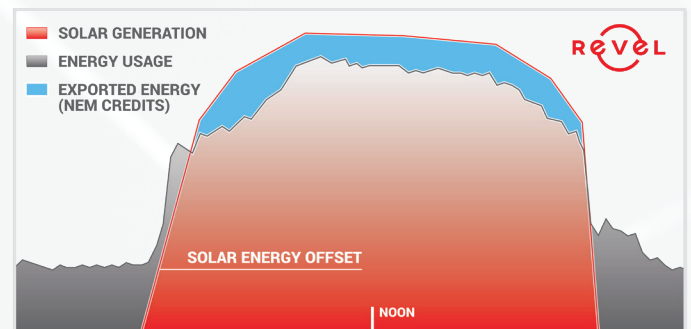

Diamond Environmental wanted to take control of their rising electricity costs and secure a sustainable future by using commercial solar, so they tasked Revel Energy to design a custom energy solution.

Revel's project managers got started, working with San Marcos and San Diego County authorities and code enforcement to collect the necessary permits and certifications.

Revel installed a 81 kW carport canopy system consisting of 144 commercial solar panels funneled into 1 inverter. The system is expected to produce over \$1M in electricity savings in its 30-year lifespan.

Taking advantage of multiple benefits and programs like the Solar Investment Tax Credit (ITC) and Net Energy Metering (NEM), Diamond's new system offsets 30% of their electricity use by earning credits for overproduction during the day that pays for use at night when the system isn't producing.

Diamond Environmental Services establishes their commitment to sustainability with this bold decision to look forward toward a better future for their business with reduced energy costs and a smaller carbon footprint, thanks to commercial solar.

Revel Energy's team of commercial, industrial and agricultural solar specialists offer turnkey solutions for California businesses to lower their electricity costs ultimately increasing cash flow.
