

2025: FINAL YEAR FOR FULL ITC + 100% DEPRECIATION

Congress & Senate seek to phase out ITC

Congress and Senate are now aligned in moving forward legislation that would phase out the Federal Investment Tax Credit (ITC) by 2028, with the first step-down beginning in 2026. While not yet passed, this proposal has strong momentum and marks a significant shift in federal solar policy.

The same legislation would also restore 100% bonus depreciation starting in 2025, creating what may be the last opportunity to combine full tax credits and accelerated depreciation for maximum project value - if the bill becomes law.

What This Means for Your Business:

- ▶ **If you wait**, you risk losing access to one of the last major federal clean energy incentives.
- ▶ **If you act now**, lock in: $(30\% \text{ ITC}) + (20\% \text{ Adders}) = 50\% \text{ ITC} + 100\% \text{ Bonus Depreciation}$.
- ▶ Offset **more than 50% of project costs** in year one through tax savings alone.

Secure Your 2025 Tax Benefits Before They Disappear
